<sup>1</sup> Claimants in states ending EB from May to August equal the average weekly number of EB weeks claimed in April 2012, as reported by states to the U.S. Department of Labor, Employment and Training Administration. Massachusetts has not yet reported these date for April so we rely on March figures. Persons impacted in Michigan and in Maine (in February) equal the average weekly weeks claimed in January 2012; in New Mexico (in January), average weekly weeks claimed in December 2011. EB payments also ended over this period in Kansas (affecting 2,000 claimants), Minnesota (6,800 claimants), and Alaska (3,500 claimants) because their unemployment rates fell below the required minimum thresholds.

<sup>2</sup> Idaho's 3-month average unemployment rate fell below 8.0 percent in May, meaning that the maximum number of weeks of EB will fall to 13 beginning June 10, 2012.

<sup>3</sup> These states reduced the maximum number of regular state UI weeks from 26. These changes affect new regular state UI claimants, as of the effective dates of the cuts; the first was Missouri, as of April 13. Persons losing EB received up to 26 regular weeks before these cuts took effect (or will take effect, as in Georgia).
